

EYEBROW AND EYELASH TINTING

STEP BY STEP

For optimum results, the hair must be dry and free of oil. Use the Hairpearl Make Up Remover to remove any and all impurities.

Mix approximately 1/2 inch of tint with 5 drops of either 6% Regular or 3% Sensitive Developer until it is a creamy paste.

Before tinting lashes, place either Hairpearl Silicone Pads or Protective Papers under eye. If using papers, put Hairpearl Relaxing Eye Cream under it so that it will hold while giving the client a smooth radiant finish.

Apply tint to brows first if doing brows and lashes together. Apply with either Hairpearl Square Or Angled Brush starting at the center and working outwards. After you have covered the brow with tint, go in the opposite direction of hair growth and apply tint throughout so that all hair is covered.

Depending on the desired intensity of color, the application should be left on the brows and lashes for approximately 6-10 minutes if using 6% developer. If you are using 3%, then leave on for approximately 15 minutes. Times will vary based on client.

When going to remove the tint, dampen a 2x2 esthetic wipe with water and remove tint from center of face in an outward direction. Repeat process until there isn't any more tint coming off.

If any color is on the skin, moisten a pad with Hairpearl Tint Remover and gently wipe it off.

Follow with Hairpearl Eye Massage Oil enriched with Vitamin E for relaxation around the eyes.
